- 12:30 – 1:15 Lunch Speaker – Greg Louganis, four-time gold medal Olympic diver**
- 1:30 – 2:00 VIP Reception-Sponsors meet and greet with Greg Louganis**

About the BRAVE Study: HMRI began a study in 2017 to follow people living with HIV over time to better understand their heart and brain health while living otherwise healthy lives with HIV. With the treatment options available today, many people are living healthy, productive, and long lives with HIV. It has become a chronic disease that can be well managed through medication regimens and minor adjustments in lifestyle. Since the start of the study, HMRI has enrolled approximately 50 individuals and plans to continue enrolling study participants. The focus of the study is to gain a better understanding of brain and cardiovascular changes among people who are HIV positive but continue to maintain viral suppression. The study also seeks to better understand accelerated aging and increased risk for non-AIDS age-related diseases such as heart disease, liver disease and neurocognitive decline.
